

Reduce bagmaker film waste

Ishida AFT Automatic Film Tracking technology continuously maintains precise alignment of film during operation for all speeds and bag sizes.

Ishida AFT kit includes tracking photo eyes, digital readout, control software, mounting hardware, and wiring.

Simple, reliable photo eyes maintain precise film tracking.

AFT eliminates film tracking problems caused by poorly wound film rolls, intermittent operation, and even subtle changes in slip resistance around the former. Reliable photo eyes keep film on track to prevent misaligned and weak back seals, downtime, and film waste, all with no operator intervention.

HEAT AND CONTROL

Order AFT with your new Ishida Atlas bagmaker or as a retrofit for existing Atlas baggers.
