

HEAT AND CONTROL®

FastBack® Blending System

An integrated drum gently mixes products.

Recipe selection, auto tare, priming, and other functions are controlled using a simple touch screen.

All-in-one system accurately weighs, blends, and conveys multiple ingredients.

Simple, precise and versatile. Accurately mix up to ten different snack, cereal, frozen food or other ingredients, and maintain the blend all the way to packaging.

Load cells precisely measure the delivery of each ingredient to maintain blend accuracy better than 1.5% per constituent, depending on the product.

User-friendly recipe control system stores settings for 50 products to provide consistent blending and fast changeovers.

Gentle slow-forward fast-back conveying motion maintains blends with no separation or layering of ingredients. Ideal for even the most delicate products, FastBack conveyors dramatically reduce product breakage and coating loss.

Proven reliable in hundreds of installations, FastBack conveyors require no preventive maintenance.

An optional applicator is available for seasonings and other powders. Coatings do not build up in the conveyor pans, eliminating unscheduled cleaning downtime and sanitation costs.

Modular design allows easy expansion. Simply add a FastBack dynamic ingredient hopper for each additional product component. You can also use your existing static or live ingredient feeding system.
