

REMOVE AIRBORNE SEASONING DUST
AT ITS SOURCE... AT A LOWER COST.

Modular Dust Collection

HEAT AND CONTROL

®

End seasoning dust pollution at a lower cost.

MODULAR DUST COLLECTION

Airborne seasoning dust creates a hazardous work environment, product cross-contamination, and a sanitation nightmare. Eliminate these problems, save energy, and take a big item off your maintenance schedule with Heat and Control's Modular Dust Collection (MDC) units.

Integrated into a new or existing FastBack On-Machine Seasoning applicator, the MDC captures seasoning dust before it becomes airborne. The product tumble drum doubles as dust collection duct and requires no hood or bracket mounted over your product.

More efficient than whole-room dust collection systems, an equivalent MDC system costs about 40% less

Can reduce energy costs by up to 30%

Durable spun polyester filter is washable and reusable

Pressure gauge alerts operator when filter needs cleaning

Dust collection tubing can be removed in seconds without using tools

To learn more about point-of-application seasoning dust collection, contact

Heat and Control at **800 227 5980**
or **info@heatandcontrol.com**.

Seasoning dust is removed before it can escape the tumble drum.

Replace the washable filter without using tools.

Quickly remove the dust collection tubing for cleaning.
