

Product Accumulation With Less Breakage!

New low profile MinuteMan takes the drop out of online storage to protect the quality of fragile snacks & baked products.

MinuteMan accumulation conveyor

Always ready for short-term storage of snacks and baked products, MinuteMan minimizes drop distances and gently handles delicate products to significantly reduce breakage.

Soft landings

Reduce initial product drop to only 6" with our optional let-down chute. Soft vulcanized belts cushion product landings. A sloped discharge belt further helps to reduce breakage as product leaves MinuteMan.

Abundant storage

To minimize breakage, the product pack is limited to a low 20", yet MinuteMan still provides up to 90 cubic feet of storage space. Actual capacity will vary according to product and production characteristics.

Fill & discharge at once

Fill and discharge rates are synchronized to eliminate the hunt-and-seek delays common to other storage conveyors.

Clean operation

Reliable live bottom belt and retracting overhead feed conveyor have no drive components located over the product zone. Large doors on both sides provide complete access so MinuteMan takes only minutes to clean.
